

More Morsels – SEC2014

Getting hooked on Morsels

“Shadow Painting the Globe”

Most of the globe is “painted” by eclipse paths after only a few centuries, as seen in this series of maps: 1900-99, 1900-2099, and 1900-2199. It takes millenniums to pick up the straggling ones. The author estimated that 63 percent of the Northern Hemisphere is covered by eclipse paths by the year 2199. Diagram by Tom Whalen.

PERIODICITY AND VARIATION
OF
SOLAR (AND LUNAR) ECLIPSES

by

PROF. DR G. VAN DEN BERGH

MCMLV.
H. D. TJEENK WILLINK & ZOON N.V. - HAARLEM

How many countries?

Challenge

Produce lists of ALL

- Partial
- Annular
- Total eclipses

For ALL countries

- From -1999
- To +3000

How???

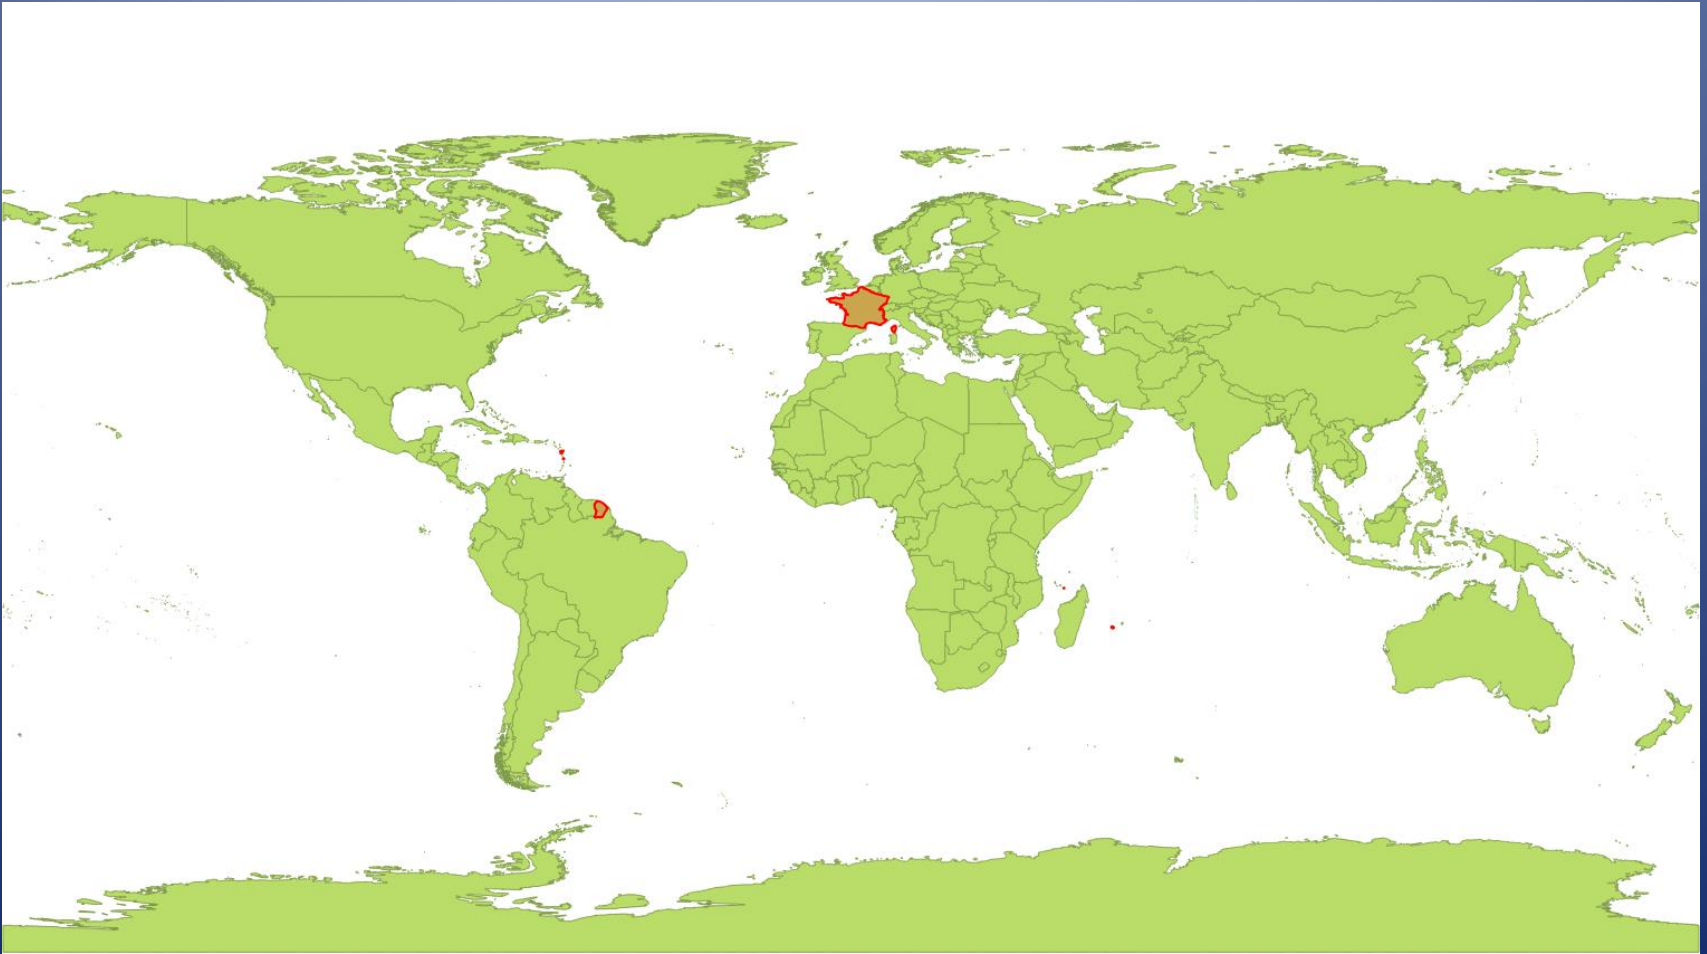

Country and mapping data

www.naturalearthdata.com

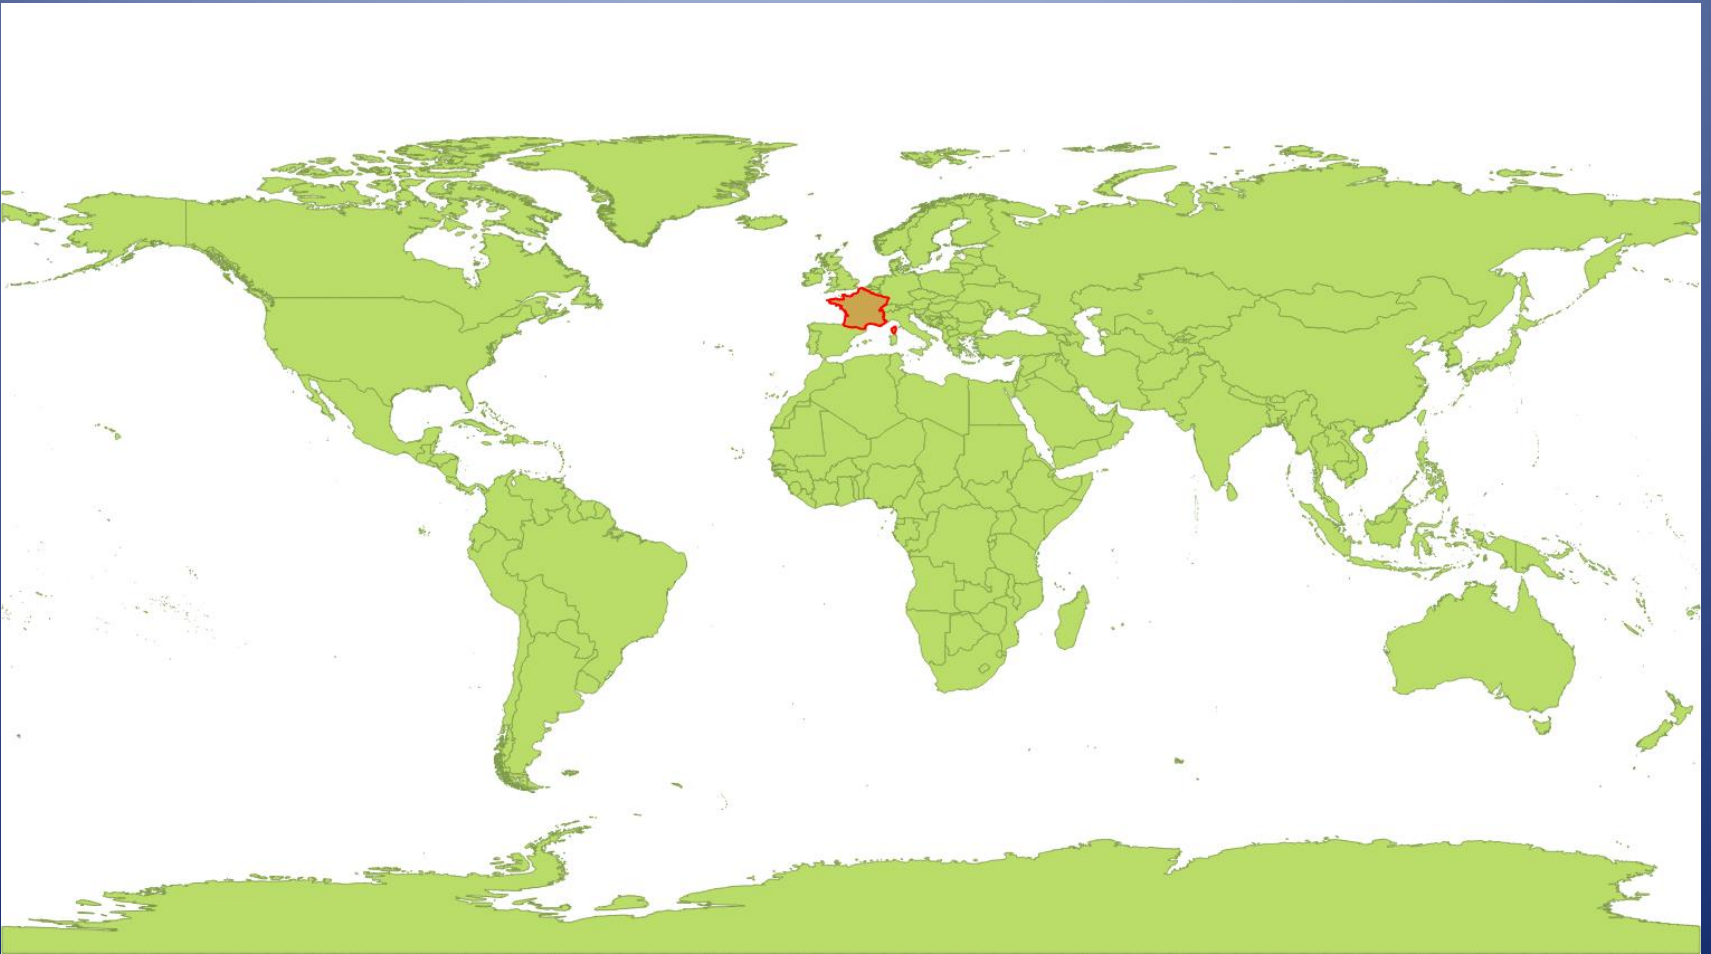

Vector Data	Number	
Sovereign States	197	Greenland part of Denmark
Countries	254	France includes some territories
Map Units	291	Australia includes remote island
Map SubUnits	351	USA = 48 states + Hawaii + Alaska
States/Provinces	3671	In most cases too much data

254 Countries

France = Mainland France, Corsica, French Guyana, Caribbean, Indian Ocean.

291 Map Units

France = Mainland France and Corsica

Romania

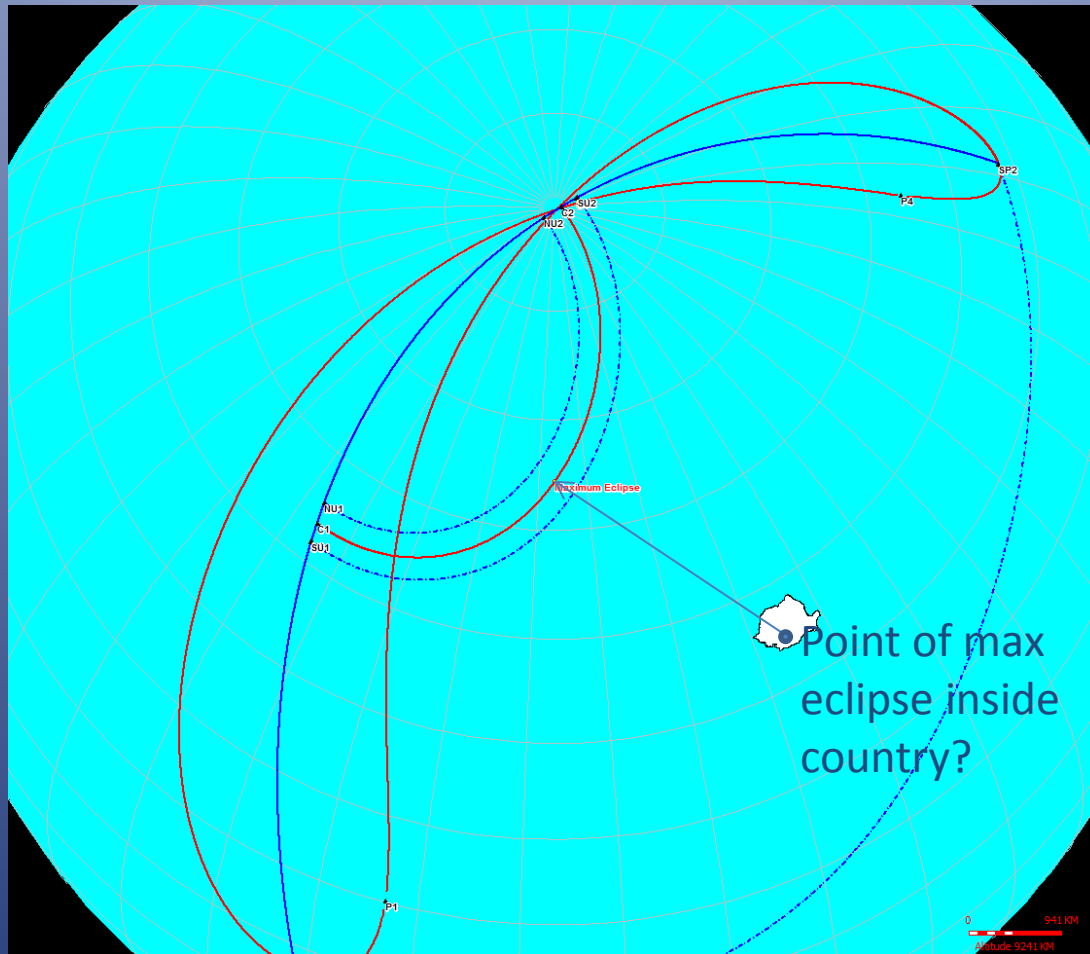

5 layers of data = Country border, lakes, rivers, roads and built-up areas
Country border is key

Romania border as points

1201 pairs of border points in NEV10m – there are some “large” gaps
Can find local circumstances for EACH border point
Eclipse Y/N, type, magnitude – hence max eclipse on country border

Country maximum eclipse MUST lie on the border

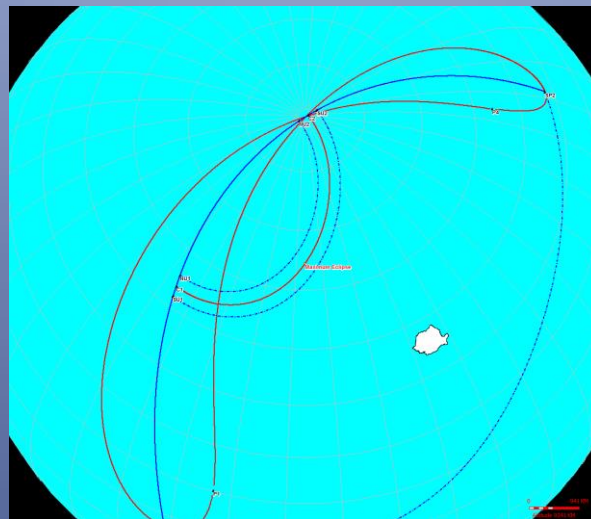

Luca's Algorithm

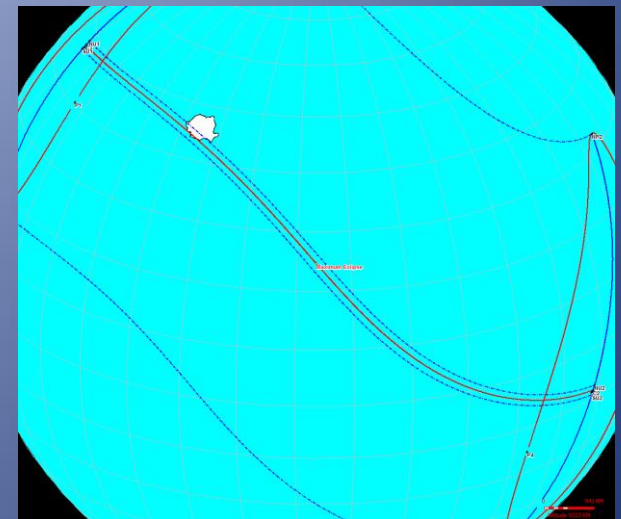

“For any given country and for any given solar eclipse, the point of country maximum eclipse must lie on that country's border, unless the point of maximum for the eclipse as a whole lies inside that country. “

Track of totality crosses Romania
-Romania sees a total eclipse
- Point of maximum for the eclipse as a whole (August 1999) actually lies inside Romania

Track of totality lies outside Romania
-Romania sees a partial eclipse
-Max eclipse visible in Romania must lie on the border

Track of totality crosses Romania
- Romania sees a total eclipse
Max eclipse visible in Romania must lie on the border

Eclipses by Country Number Crunching

- Natural Earth Vector 1:10million
 - 291 “countries”
 - 553176 points
 - 11898 solar eclipses
 - **6.58 billion calculations**
 - Note – some special cases
 - Not yet fully handled

USA Solar Eclipses

617 total
723 annular
3810 partial

In 5000 years

- 8 total eclipses exceed 6minutes duration in USA
- 2045 August 12th total 6m 6sec
 - 12 lunations after 2044 Aug 23rd total eclipse

Eclipses with most countries to see totality or annularity

1433 June 17th
Total in 39 countries

-1763 October 8th
Annular in 53 countries

Eclipses visible in most countries

Total eclipse 1600 July 10th
212 countries
Total in 11 countries
Partial in 201 countries

Annular eclipse 410 June 18th
210 countries
Annular in 11 countries
Partial in 199 countries

Total Eclipses by Country

- 3171 pure total
- 571 hybrid eclipses in 5000 years

	A	D
1	Country	#Total
2	Russia	634
3	United States of America	617
4	Brazil	495
5	China	459
6	Canada	447
7	Australia	427
8	Antarctica	392
9	India	355
10	Chile	347
11	Indonesia	321
12	Argentina	302
13	Japan	256
14	Democratic Republic of the Congo	245
15	Mexico	241
16	Kazakhstan	213
17	Algeria	213
18	Colombia	213
19	Sudan	207
20	Peru	196
21	Saudi Arabia	195

Annular Eclipses by Country

-3956 pure annular
- 571 hybrid in 5000
years

	A	B	D
1	Country	#Annular	#Total
2	United States of America	723	617
3	Russia	698	634
4	Antarctica	567	392
5	Brazil	546	495
6	Australia	510	427
7	Canada	490	447
8	China	489	459
9	Chile	412	347
10	India	402	355
11	Indonesia	376	321
12	Argentina	370	302
13	Japan	288	256
14	Democratic Republic of the Congo	273	245
15	Mexico	272	241
16	Peru	255	196
17	Kazakhstan	244	213
18	Algeria	242	213
19	French Polynesia	233	157
20	Myanmar	231	190
21	Mozambique	231	167

Special Case 1

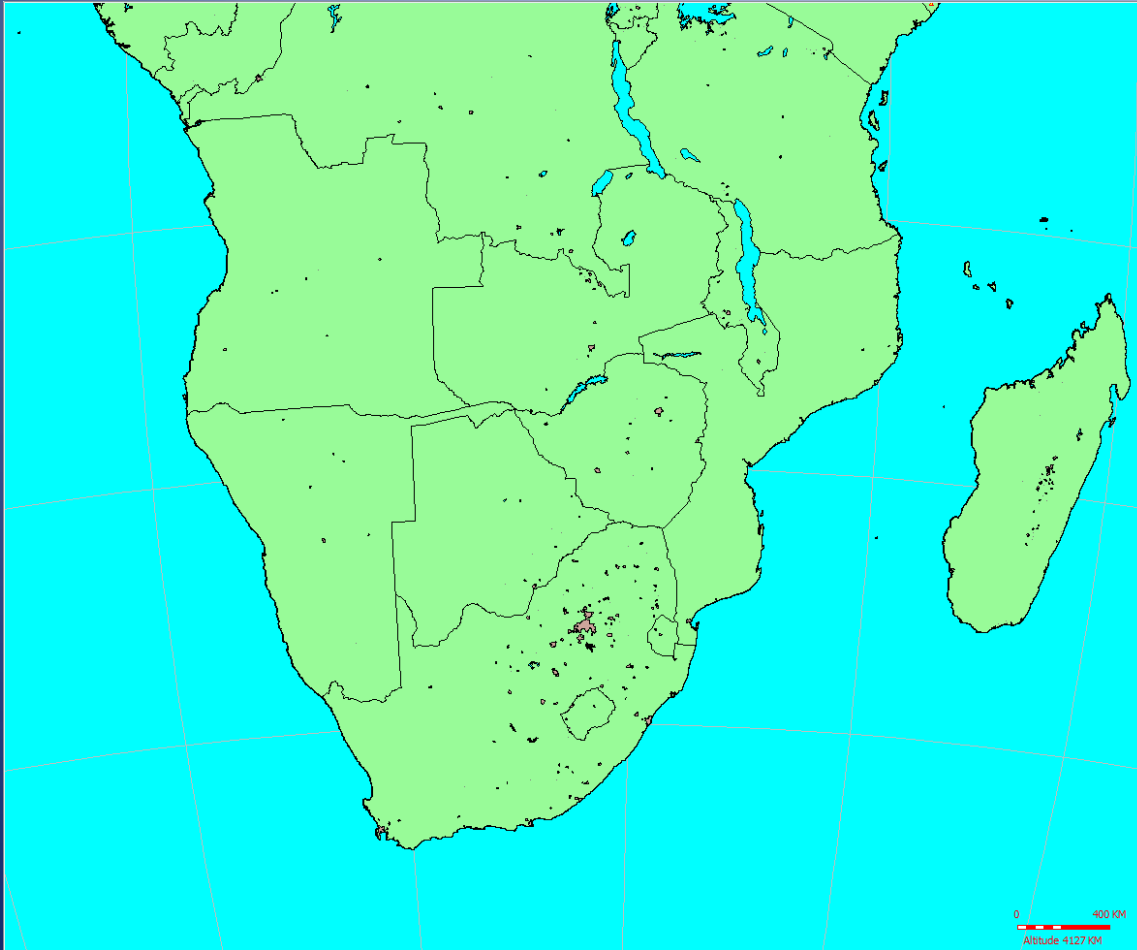

- Eclipse track is very narrow and passes between adjacent points on boundary
 - Eclipse misclassified
 - Hybrid eclipse 164 March 10th in Peru
 - Totality 3 seconds
- Use binary search to find point of greatest eclipse on boundary

Special Case 2

- 2379 March 19th
- Grazes Austrian border
- Amount of detail in digital mapping can change the type or duration

Special Case 3

- Lesotho is wholly inside South Africa
- Check “Point in country” algorithm implementation returns correct country name!

Aqueous Eclipses (MAM5)

Total eclipse 2310 May 29th (5m 10sec) misses all Pacific islands

Aqueous total eclipses

Longest 6m 6s in 222 July

Next eclipse 2m 28s in 2057 Jan 5th

74 total aqueous eclipses in 5000 years

Aqueous annular eclipses

Longest 10m 44s in -249 November

Next eclipse 22s in 2032 May 9th

97 annular aqueous eclipses in 5000 years

Lunation Gaps

- Gaps between USA total eclipses
- Longest gap is 587 lunations
- Shortest gap is 6 lunations
- Gap to 2017 from 1991 is 323 lunations

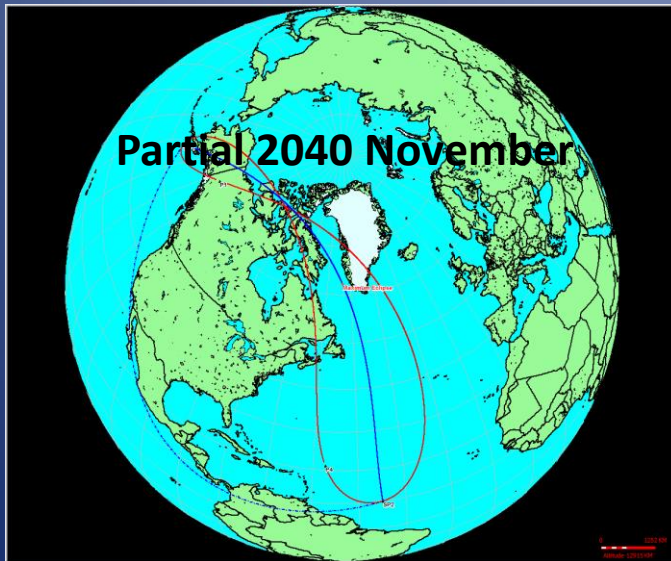

THE ECLIPSE INN

Quiz Question 1

- Can you see totality in Antarctica on the Summer Solstice – i.e. June?

5 interesting eclipses in next 35 years

2 Annular eclipses 5 lunations apart

Smallest possible gap between annulars
4 such pairs in 5 millenia Canon
Pair in -1461 overlap on land

2 Partial eclipses 77 lunations apart

77 lunations is longest gap in 5 millenia Canon and longest gap in 26000 year Canon
12 consecutive total or annular eclipses
Mentioned in Meeus "Elements of Solar Eclipses"

Shortest gaps between eclipses

	Eclipse Type	Lunations
Solar	Partial	1
	Pure Annular	5
	Pure Total	11
	Annular and hybrid	5
	Total and hybrid	6
	Hybrid	6
Lunar	Partial Penumbral	1
	Total Penumbral	11
	Partial Umbral	5
	Total Umbral	6

2039 December 15th

Next eclipse to cross the International Date Line twice!

International date-line and eclipses

Australia 2012 – classic case
Crossed the date-line once
Go west = add one day
Go east = subtract one day

Kiribati adjustment January 1st 1995
Theoretically possible to cross date-line
several times!
Rob van Gent pages on web

Saros 145

Saros 146

Saros 145, 146 and 147

Saros 76 – 3 maxima

Stack the solar saros side-by-side

Each saros series is 358 lunations apart = 1 in ex

The Inex

- 358 lunations
- Stack the saros series one inex apart

Moon's orbital cycle	Length in days	Number of periods	Days
Synodic month	29.530589	358 lunations	10571.9509
Anomalistic month	27.554550	383.67	10571.8542
Draconic month	27.212221	388.5	10571.9479

358 lunations - approximately 29years 11days

Solar Saros-Inex Panorama

Saros 90 to 150

Saros

Inex

Lunar Saros-Inex Panorama

- Saros 90 to 150
- In increasing order of shading
 - Partial penumbral
 - Total penumbral
 - Partial umbral
 - Total umbral

Can we combine the two panorama?

- Crazy idea!
- Why not?

A merged Panorama

- First attempt
- Using corresponding saros and inex numbers
- Poor overlap

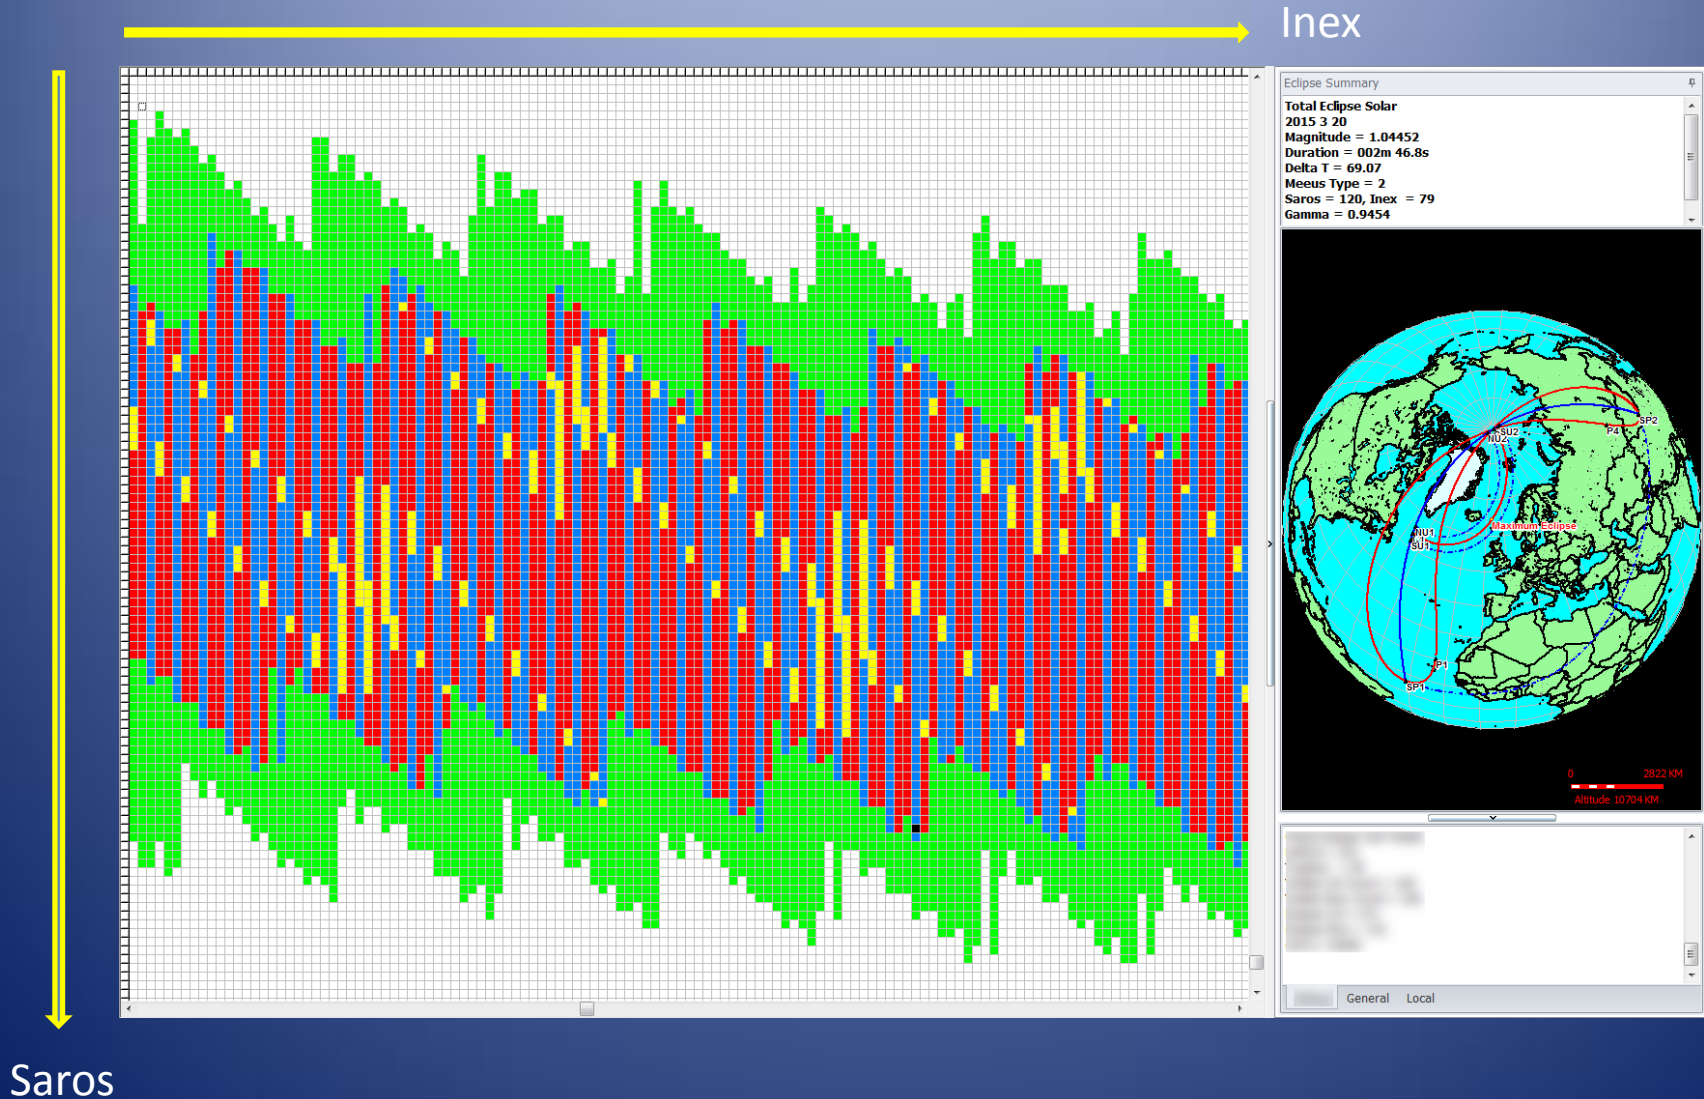

The merged Panorama

- Renumber the lunar saros and inex
- Luca Quaglia's idea
- $LQ\ Saros = Saros + 7$
- $LQ\ Inex = Inex + 12$
- Result is half a saros offset

The Solar Saros-Inex Panorama

Solar Semester starts 2015 March 20th

2015 Sept 13th

6 lunations later

6 lunations = $5\text{inex} - 8\text{saros}$ or $(5 \cdot 358 - 8 \cdot 223) = 6$ lunations

2016 March 9th

6 lunations later

Eclipse Summary

Total Eclipse Solar
2016 3 9

2017 Aug 21st

6 lunations later

Eclipse Summary

Total Eclipse Solar
2017 8 21
Magnitude = 1.03056
Duration = 002m 39.9s
Delta T = 70.28
Meeus Type = 4
Saros = 145, Inex = 39
Gamma = 0.4367

0 2022 KM
Altitude: 10794 KM

General Local

2018 Feb 15th

6 lunations later

Eclipse Summary

Partial Eclipse Solar
2018 2 15
Magnitude = 0.5991
Duration = 000m 00.0s
Delta T = 70.54
Meeus Type = 3
Saros = 150, Inex = 31
Gamma = -1.2116

The globe shows the Earth with a red line indicating the path of maximum eclipse and blue lines indicating the limits of visibility. The path starts in the Pacific Ocean, passes through the Americas, and ends in the Atlantic Ocean. A scale bar at the bottom right indicates 0 to 2022 KM and an altitude of 10794 KM.

General Local

2018 July 13th

5 lunations later = big jump back down

5 lunations = $53\text{saros} - 33\text{inex}$ or $(+53*223 - 33*358) = 5$ lunations

2018 Aug 11th

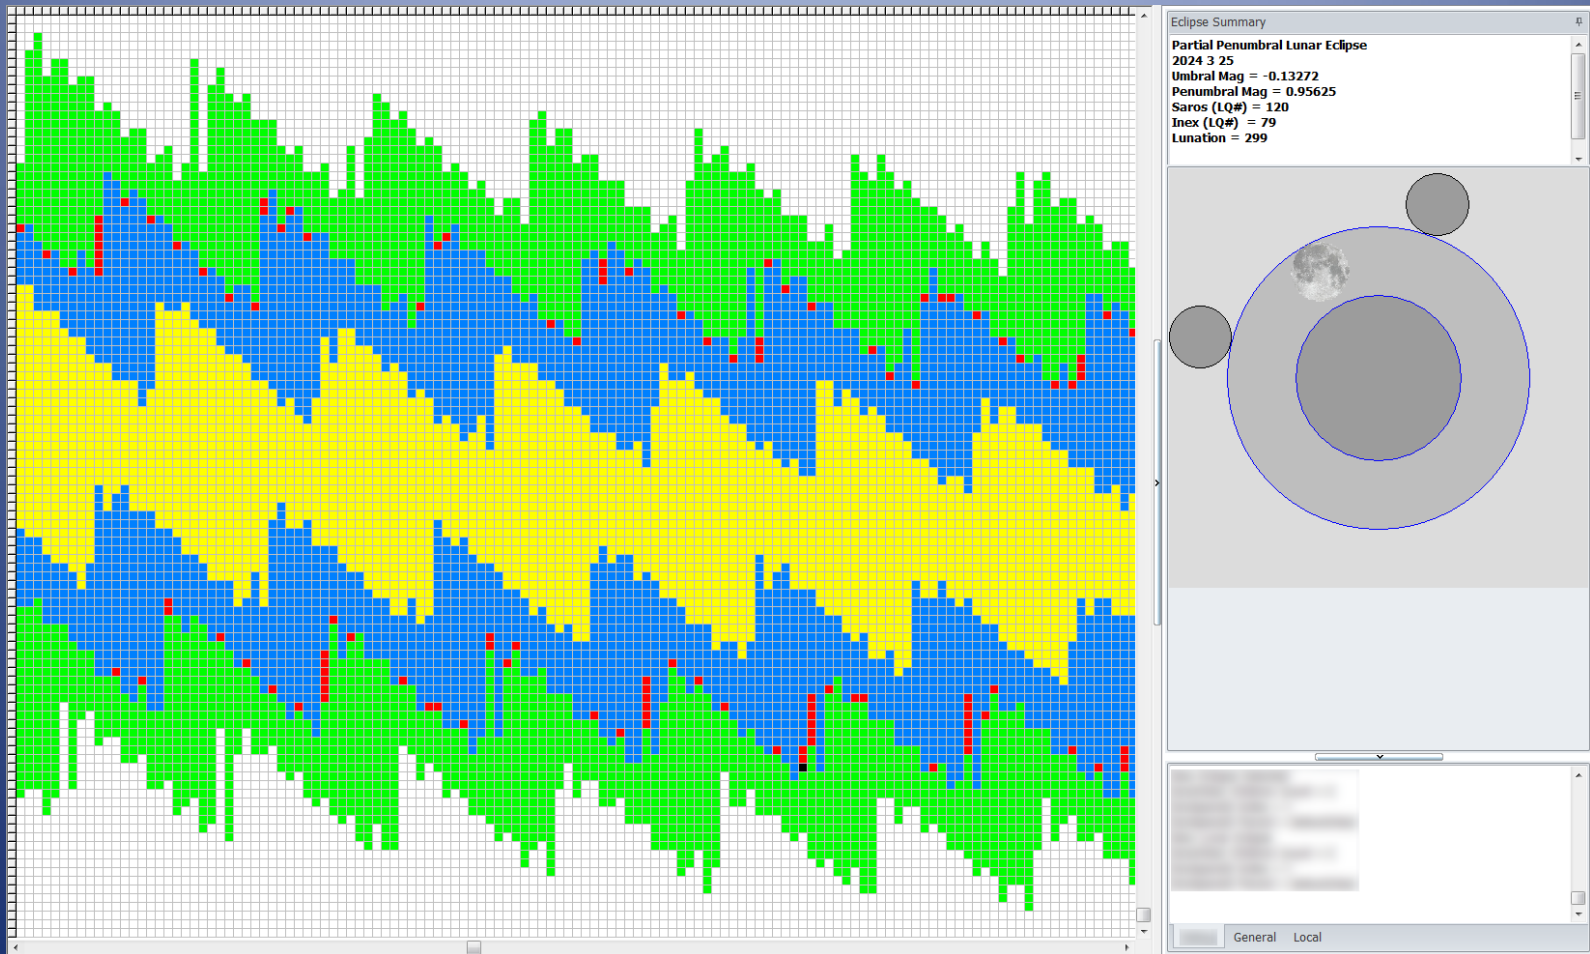

1 lunation later so really big jump back up

5+1 = 6 lunations after last but one eclipse

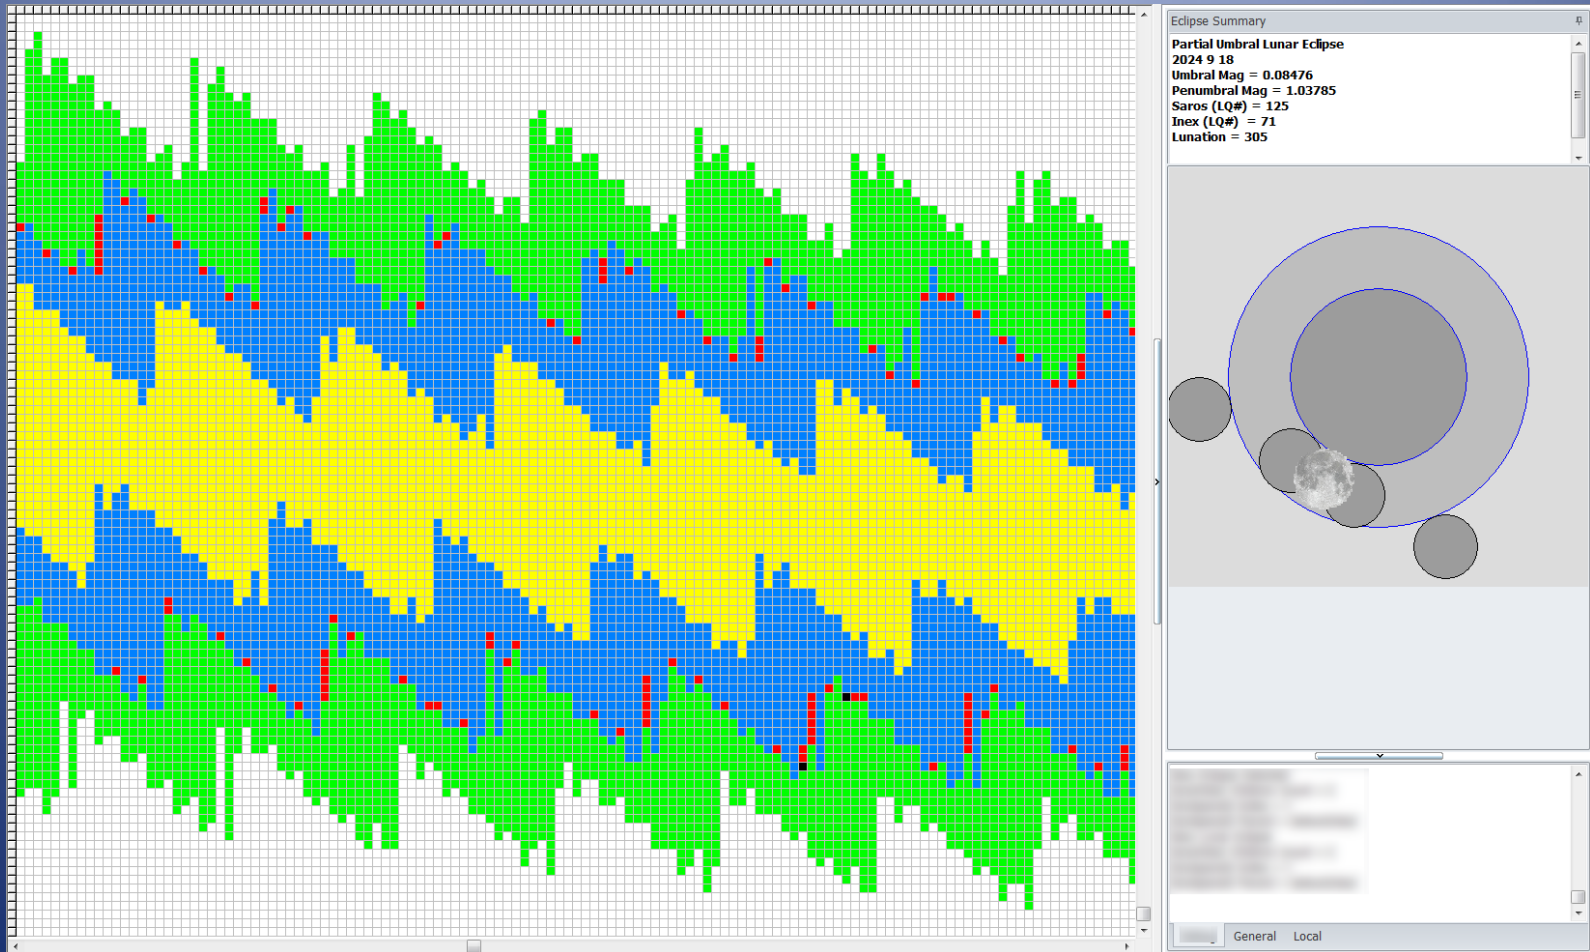

$$1 \text{ lunation} = 38 \text{ inx} - 61 \text{ saros} \text{ or } (38 * 358 - 61 * 223) = 1 \text{ lunation}$$

Lunar Semester – start half a saros later = 2024 March 25th

2024 Sept 18th

6 lunations later

6 lunations = $5\text{inex} - 8\text{saros}$ or $(5 \cdot 358 - 8 \cdot 223) = 6$ lunations

2025 March 14th

6 lunations later

Eclipse Summary

Total Umbral Lunar Eclipse
2025 3 14

1.0Km

Leingartner Diagrams - 1

- Morsels 5
- “Saros Portraits”
- All eclipses in a saros
- Solar eclipses - Earth and (ant)umbra shadow for each eclipse at maximum

Leingartner Diagrams - 2

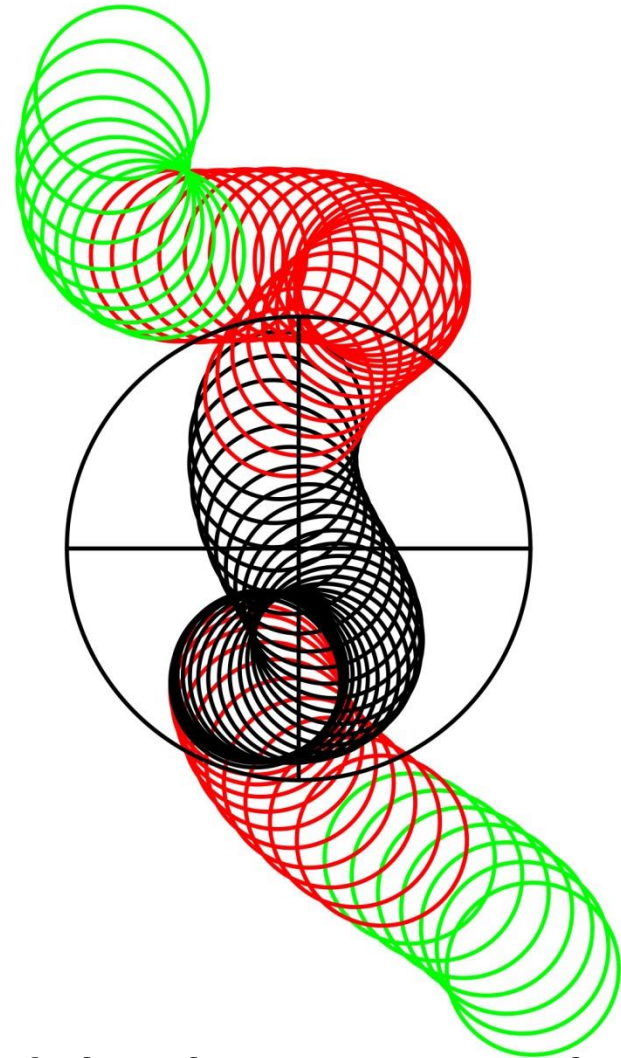

- “Lunar Worms”
- Umbral shadow fixed size
- Change size of the moon

SOLAR SAROS 46

LUNAR SAROS 39

Remember the lunar saros and the shapes are similar!

Tying up the loose ends

2 Partial eclipses 77 lunations apart

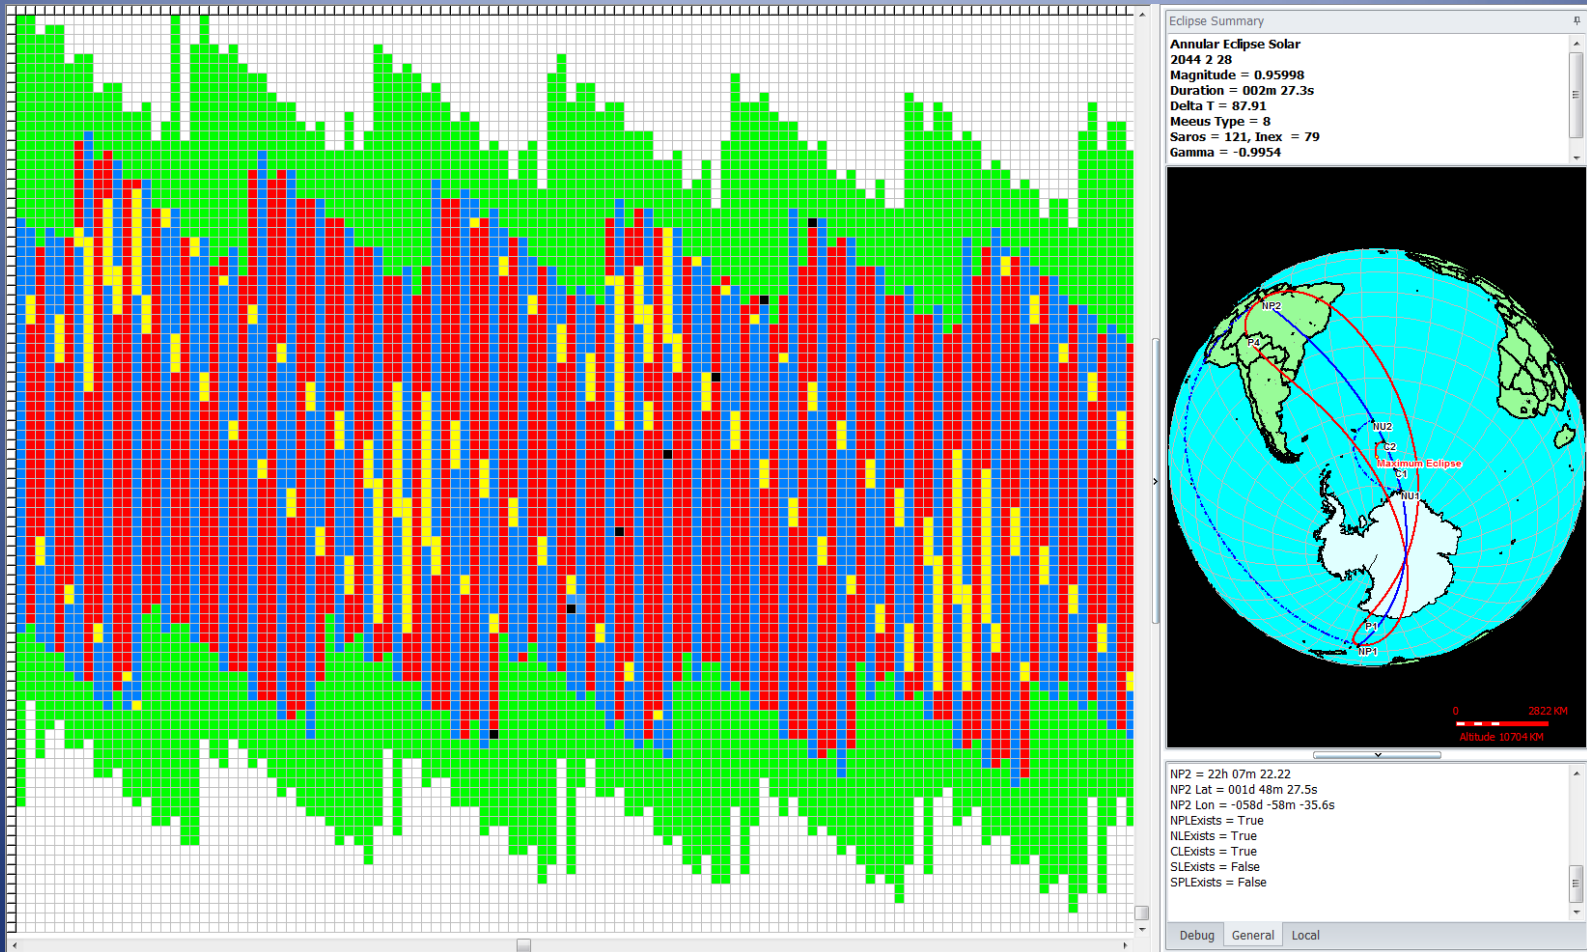

12 consecutive total or annular eclipses
Visualised on the saros-inex panorama

77 Lunation Gap

First 6 eclipses are 6 lunations apart – each annular or total

77 lunation Gap – (part 2)

Gap to 7th eclipse is 5 lunations – but this is an annular eclipse!

77 Lunation gap – (part 3)

Next 5 eclipses are 6 lunations apart – each annular or total
– so 12 consecutive annular or total eclipses!

THE ECLIPSE INN

Quiz Question 3

- "Sines, Cosines and Tangents, apparently they were very important" ... "most helpful in" ... "foretelling eclipses, the arrival of comets and such like. I am very glad there are quite a number of people born with a gift and a liking for all of this" ... "I hope the Mathematicians" ... "are well rewarded. I promise never to blackleg their profession nor take the bread out of their mouths."

THE ECLIPSE INN

Quiz 1 = Can you see totality in Antarctica at the summer solstice?

**Yes, in
theory
No in
practice
Six days later**

**Total eclipse
1107 June 22nd**

**Solstice
1107 June 16th**

Quiz 3 = Winston Churchill

- "Sines, Cosines and Tangents, apparently they were very important" ... "most helpful in" ... "foretelling eclipses, the arrival of comets and such like. I am very glad there are quite a number of people born with a gift and a liking for all of this" ... "I hope the Mathematicians" ... "are well rewarded. I promise never to blackleg their profession nor take the bread out of their mouths."

More Morsels Summary

- Eclipses by Country – use digital data
 - Maximum eclipse MUST lie on the border
- 5 interesting eclipses
 - Gaps of 5 and 77 lunations
- Visualising the saros
- Panorama patterns for a graphical explanation
 - Semester
 - Renumber the lunar saros and inex
 - Lunation gaps on saros-inex panorama

Credits

- Luca Quaglia
 - 26000 year canon of solar and lunar eclipses
 - The half saros and renumbering the lunar saros and inex
 - Brain-storming eclipses by country
 - Drawing the Leingartner diagrams
 - Drawing the merged saros-inex panorama
